I am based in Marseille, France

Skills

I completed a [Data Science and AI](#) bootcamp run by Le Wagon in December 2023, and now I am looking for interesting work. I began learning to code after a career as a technology journalist (focused on High Performance Computing), and am now looking to move into a data science role.

I'm a 50-something woman with a wide-ranging career behind me and I believe I can bring a fresh perspective to data.
